

# Map Your Community: Community Assets and Evacuation Routes

**Guidelines:**

1. Start with **key landmarks** like your home, landscape features etc.
2. Identify fire halls, cooling centres, and/or **safe shelter sites** that you could evacuate to
3. Identify the location of **exit points** (i.e., roads out of town)
4. Some areas within a community may be more **vulnerable** to fire than others i.e., if they have dry, uncleared vegetation that could serve as fuel. Identify these areas to ensure your evacuation routes avoid them if possible, as they may be blocked off or other inaccessible in the event of a fire.
5. Based on the location of your home and key sites for potential evacuation, determine and draw out viable, **safe evacuation routes**.
